

Nitty Gritty

NitFree Comb

Our amazing Nitty Gritty NitFree Comb is unlike any other product on the market, our patented micro spiral comb is the only head lice product which removes not only the smallest head lice as well as the nits – the empty egg cases – but also, most importantly, it even removes the unhatched 'live' head louse eggs.

Perfect Teeth

Head lice are about half a millimetre long, and 2 to 3 millimetres wide. They attach to each hair strand with a strong glue, which makes them very difficult to remove. But the Nitty Gritty NitFree Comb uses state of the art, cutting edge advanced technology to ensure everything is removed effortlessly and painlessly, even the unhatched eggs, which all other combs leave behind. Its 33 microgrooved steel teeth remove even the very smallest head lice and eggs without pulling, cutting or hurting the hair they cling to. No other comb can do this.

Mind The Gap

The 33 microgrooved teeth are separated from each other by a carefully-calculated gap, which is smaller than even the tiniest nit. And their extra length goes all the way through even the thickest, curliest locks, to remove more nits in fewer passes. Long and fine, or short and curly, the Nitty Gritty NitFree Comb works equally well in all hair types.

Groovy!

Every one of the Nitty Gritty NitFree Comb's 33 teeth carries a spiral "microgroove". Look closely and you'll see they're shaped like tiny drill bits. Why? Because this makes it impossible for head lice and eggs caught by the comb to slip out and escape when they're trapped between two grooved steel teeth. The teeth of a conventional metal or plastic comb will bend around nits, rather than gripping and dragging them off the hair surface. But look at our comb under a microscope and you'll see the difference. The microgroove on each tooth works to pull a tiny spiral cutting edge through your hair. And the teeth are welded into the comb handle in a special process, which keeps that vital microgroove working all the way through your hair. It is amazingly effective at breaking the hermetic sealing of the nits, to remove them without tearing or pulling your hair.

Hot Tips

The end of each comb tooth is machined precisely into the shape of a cone. The cones separate the hair gently and direct each hair strand through the blades without snapping or tangling. The tip of the cone is then rounded, so there is no sharp point to prick, scratch or bruise the scalp. Small children and older family members we have asked both say that this is one of their favourite things about the Nitty Gritty NitFree comb.

Steel Appeal

The special stainless steel used to manufacture the comb won't rust or tarnish (any discolouration on the back of the comb is not rust). Each comb retains its tough, stylish appearance even after prolonged immersion in water and exposure to the different chemical products - such as permethrins, decamethrins, vinegar - found in hair treatments. The comb is designed to be boiled for asepsis: ideal when the same comb is to be used for several family members.

Can You Handle It?

Use the Nitty Gritty NitFree Comb anywhere - even in the bath or shower! It won't rust or tarnish there are no sharp corners or edges to poke or scratch you, and the comb's non-slip grips make it easy to use even when you're up to your elbows in soapy water. And it's comfy, which encourages users to comb deeper, more thoroughly and more often than they would with an old-style "scratchy" comb. Unlike all other combs on the market, the Nitty Gritty NitFree Comb is built to last from top-quality stainless steel, carries a lifetime guarantee, is available on prescription and is the first choice head lice remedy of a growing number of healthcare and childcare professionals.
